## SPECIFICATIONS

CRT	: 13V 90 in line, 0.41 or 0.42mm Dot pitch, gray face, high resolution	Video band width	: RGBI: 15 MHz Analog RGB: 10 MHz
Input signals	: Digital RGBI, Analog RGB, PAL Composite, Separated Video (luma & chroma) and Audio		Composite: 4.4 MHz Separated Video: 5.2 MHz (Luma & Chroma)
Input level	: Digital RGBI: TTL Analog RGB: Video 0.7 Vpp Sync TTL level Comp., Video, Chroma: 1 Vpp/75	Scanning frequency	: Horizontal: 15.625 KHz Vertical: 50 Hz
Display size	: 233(h) × 180(v) mm	Audio	: Input: 1 Vpp/47K Output: 1W
Colors	: RGBI: 16 colors Analog RGB: Full colors Comp: Full colors	Dimensions	: 360(W) × 376(D) × 327.5(H) cm
Resolution	: RGB: 2,000 characters (80 column × 25 lines) Comp: 1,000 characters (40 column × 25 lines)	Weight	: Approx. 12 Kg
		Power input	: 220 VAC, 50 Hz, 0.5A
		Power consumption	: 75W

\*Design, features and specifications are subject to change without notice.

# IMPORTANT SERVICE SAFETY INFORMATION

## **WARNING:**

An isolation transformer must be used between the AC supply and the AC plug of the color monitor before servicing or testing is performed on this monitor, since part of the chassis and the heat-sink are directly connected to one side of the AC line which could present a shock hazard. The chassis of the monitor should never be connected ground. Before servicing is performed, read all the precautions labelled on the CRT, chassis, and on the inside of the cabinet of this monitor.

### **X-RAY RADIATION WARNING NOTICE**

**WARNING:** PARTS WHICH INFLUENCE X-RAY RADIATION IN HORIZONTAL DEFLECTION. HIGH VOLTAGE CIRCUITS AND PICTURE TUBE, ETC., ARE INDICATED BY ( ★ ) IN THE PARTS LIST FOR REPLACEMENT PURPOSES. USE ONLY THE TYPE SHOWN IN THE PARTS LIST.

### **PRODUCT SAFETY NOTICE**

**WARNING:** FOR CONTINUED SAFETY, REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER RECOMMENDED PARTS. THESE PARTS ARE IDENTIFIED BY SHADING AND BY ( ) ON THE SCHEMATIC DIAGRAM.

\*\*\*\*\*

### **NOTICE D'AVERTISSEMENT DE RADIATION AUX RAYONS X**

**AVERTISSEMENT:** LES PIÈCES QUI INFLUENCENT LES RAYONS X AU COURS DE LA DÉVIATION HORIZONTALE, LES CIRCUITS À HAUTE TENSION ET LE TUBE-IMAGE, ETC. SONT ACCOMPAGNÉS D'UN ASTÉRIQUE ( ★ ) DANS LE CATALOGUE DE PIÈCES DÉTACHÉES. DANS LE CAS D'UN REMPLACEMENT, UTILISER UNIQUEMENT LES MODÈLES DE PIÈCES INDICÉS DANS LE CATALOGUE DE PIÈCES DÉTACHÉES.

### **NOTICE DE SECURITE**

**AVERTISSEMENT:** POUR ÊTRE ASSURÉ D'UNE SECURITE OPTIMALE À TOUT MOMENT, REMPLACER LES COMPOSANTS CRITIQUES UNIQUEMENT PAR LES PIÈCES RECOMMANDÉES PAR LE FABRICANT DE L'APPAREIL. CES PIÈCES SONT IDENTIFIÉES PAR UNE ZONE D'OMBRE ET PAR SYMBOLE ( ) SUR LE SCHEMA DE MONTAGE.

The manufacturer's warranty and liabilities will be void if any unauthorized modifications, alterations or additions are made. For replacement purposes, use the same type or specified type of wire and cable, ensuring that the positioning of the wires is followed (especially for H.V. and power supply circuits). Use of alternative wiring or positioning could result in damage to the set or in a shock or fire hazard.

The picture tube used in this monitor employs integral implosion protection and should be replaced with the tube of the same type number for continued safety.

When handling the CRT, shatter-proof goggles must be worn after completely discharging the high voltage circuit. Do not lift the picture tube by the neck.

**WARNING:** BEFORE RETURNING THE MONITOR TO THE CUSTOMER PERFORM THE FOLLOWING SAFETY CHECKS IN ITEMS, 1, 2 AND 3 FOR THE CONTINUED SAFETY OF THE SERVICEMENT AND CUSTOMER.

\*\*\*\*\*

**AVERTISSEMENT:** AVANT DE RETOURNER LE MONITEUR AU CLIENT, PROCÉDER AUX CONTRÔLES DE SECURITE DES ITEMS 1, 2 ET 3 POUR ASSURER UNE SECURITE OPTIMUM AU REPARATEUR COMME AU CLIENT.

### 1. Leakage Current Test:

Plug the AC power cord directly into a 220V AC outlet (Do not use an isolation transformer for this test). Measure the current flowing from all exposed metal parts of the cabinet, including the rear cover, (handle bracket, wooden cabinet, screw heads, video input terminal, shaft, etc.) to the ground pin of an AC outlet or to a known ground. (water-pipe, conduit, etc.)

This leakage test should be performed with the AC switch ON and repeated with the AC switch OFF. The measured current must be less than 0.5 milliamp.

Any measurements not within the limits outlined above are indicative of a potential shock hazard and corrective action must be taken before returning the instrument to the customer.

### 2. Resistance Test:

With the AC plug is removed from the 220VAC outlet, place a jumper across the two attachment plug prongs except Grounding Pin. Turn the switch ON. Using an ohmmeter, connect one lead to the jumped AC plug and touch the other lead to each exposed video input terminal, and to any exposed metal parts. The resistance measured should not be less than 1.0 megohm or grater than 5.2 megohms. Any resistance value below or above this range indicates an abnormality which requires corrective action. Repeat the test with the AC switch in the OFF position.

### 3. Wire Routine:

In case of removing Wire Clamp during service, make sure to return Clamp and Wiring routes to original positions after servicing.

# INSTALLATION AND CHASSIS PARTS LOCATION

## INSTALLATION OF THIS COLOR MONITOR CHASSIS AND INITIAL CHECK POINTS

When installing this color monitor chassis, first check operation on a black and white telecast. Check and if necessary, adjust centering, size, and locus. Observe the picture for proper black and white reproduction (tracking) over all areas of the screen. No objectionable color shading or fringing should be evident. If shading or fringing is evident, degauss the monitor.

In most instances after installation, a technician need only degauss the faceplate area and touch-up the static (center) convergence.

## CHASSIS PARTS LOCATION

The degaussing coil should be moved slowly around the front faceplate of the picture tube and around the sides and front of the monitor. The coil should then be withdrawn slowly to a distance of at least six to ten feet before disconnecting from the AC supply.

This monitor chassis is equipped with an automatic degaussing circuit which effectively demagnetizes the faceplate each time the monitor is switched ON after having been OFF for at least ten minutes.

### Note:

See 'SERVICE ADJUSTMENT' on page 12 for details of adjusting procedures.

Fig. 1

POWER BOARD

NECK BOARD

Fig. 2

# SERVICE INSTRUCTIONS

## CHASSIS REMOVAL (SEE FIGS. 3/4)

1. Remove the six screws securing the rear cover of the cabinet. (See Fig. 3)
2. Pull the rear cabinet about 10cm to the rear.
3. Remove (pull to the rear) the speaker connection near the audio output at the left side of the cabinet. (See Fig. 4)
4. Remove the rear cabinet.
5. Remove solder connection of the black wire connecting CRT grounding and neck p.c. board, then remove the neck p.c. board from the picture tube. (See Fig. 5)
6. Remove the second anode cap.
7. Remove the connectors as follows:
  - 1) Deflection yoke connector
  - 2) Degaussing coil connector
  - 3) Speaker connector
  - 4) Power indicator connector
8. Remove the two screws securing the power switch.
9. Take the chassis out of the cabinet.
10. To install the chassis, repeat the above procedure in reverse order.

Fig. 4

Fig. 3

Fig. 5

## MAIN CHASSIS SERVICING

1. Remove the rear cabinet.
2. Repairing of main chassis can be done easily, if stood as shown in Fig. 6.

Fig. 6

## PICTURE TUBE REMOVAL

In order to remove or replace the picture tube, the chassis must first be removed. Refer to Chassis Removal procedure. After the chassis has been removed, proceed as follows.

1. Loosen the clamping screws on the deflection yoke, purity and static convergence magnet, and remove them.
2. Remove four screws securing the picture tube to the front cabinet.

Fig. 7

## PRECAUTIONS FOR REPAIRS

1. Check for bad contacts on connectors on the main PC board and elsewhere by applying hand pressure.
2. Check AC power supply for problems-e.g. blown fuse, bad switch or AC outlet.
3. Check for intermittents or defective soldering on the main board by striking the reverse side of the board gently with an insulated bar.
4. When soldering PC boards, limit the soldering iron temperature to 500°F (200°C) to avoid peeling of the foil.
5. When soldering transistors or other semiconductors, use tweezers or a heat sink clip as shown in Fig. 8 to prevent heat damage.

Fig. 8

## TROUBLESHOOTING

As major parts of this chassis employ ICs, defects can often be isolated by referring to the table of symptoms in Table 1. Additional checks of transistor and IC DC voltages and waveforms as shown on the schematic will assist in pinpointing the problem area. Remember also to check for faulty resistors and capacitors, etc. around defective ICs and transistors.

IC/TR	SYMPTOM
I101: POWER SUPPLY CIRCUIT	NO RASTER
I201: HORIZ OSC, DRIVE, SYNC SEP CIRCUIT	NO RASTER, NOPICTURE, NO HIGH VOLTAGE UNSTABLE PICTURE
I202: SYNC PROCESSING CIRCUIT	PGB MODE UNSTABLE PICTURE
I301: VERT OSC, OUTPUT CIRCUIT	HORIZONTAL LINE ONLY, POOR VERTICAL SCAN
I401: VIDEO PREAMP, COMPOSIT COLOR MATRIX, MODE SWITCHING RGB AND COMPOSIT SIGNAL, AUTO OUT-OFF CONTROL CIRCUITS	NO PICTURE OR POOR PICTURE, NO AUTO CUT-OFF CONTROL, NO MODE SWITCHING OF COMPOSITE AND RGB SIGNAL
I402: 12V REGULATOR	NO PICTURE OF POOR PICTURE
I403: 5V REGULATOR	RGB MODE NO PICTURE, POOR PICTRE
I601: COMPOSIT COLOR CIRCUIT	NO COLOR, UNSTABLE COLOR
I602: MODE SWITCHING CIRCUIT	NO MODE SWITCHING, NO PICTURE, UNSTABLE PICTURE
I701, I702: TTL CIRCUIT	TTL RGB MODE. NO PICTURE. POOR PICTURE
I801: SOUND CIRCUIT	NO SOUND OR POOR SOUND
Q201: HORIZ DRIVE CIRCUIT	NO PICTURE, NO HIGH VOLTAGE
Q202: HORIZ OUTPUT CIRCUIT	NO PICTURE, NO HIGH VOLTAGE
Q203: SYNC SWITCHING CIRCUIT	RGB MODE, UNSTABLE PICTURE
Q601: COLOR INPUT BUFFER CIRCUIT	NO COLOR, POOR COLOR
Q602: COMPOSIT BUFFER CIRCUIT	COMP/SEP MODE, NO VIDEO OR POOR VIDEO
Q701, Q702, Q703: TTL BUFFER	TTL MODE, NO PICTURE OR POOR PICTURE
Q704: TTL COLOR MATRIX CIRCUIT	TTL MODE, NO BROWN COLOR, OR UNSTABLE COLOR
Q501-Q504: R OUTPUT CIRCUIT	NO RED PICTURE
Q505-508: G OUTPUT CIRCUIT	NO GREEN PICTURE
Q509-Q512: B OUTPUT CIRCUIT	NO BLUE PICTURE

## TROUBLESHOOTING CHARTS

The following charts are devoted to troubleshooting which, if followed carefully, will assist you in tracking down a fault to the collect stage. In order to utilize the charts (fault trees), firstly establish the complaint, i.e. no raster.

Locate the chart applicable and then progress through the various alternatives until a final block the offending components or stage.

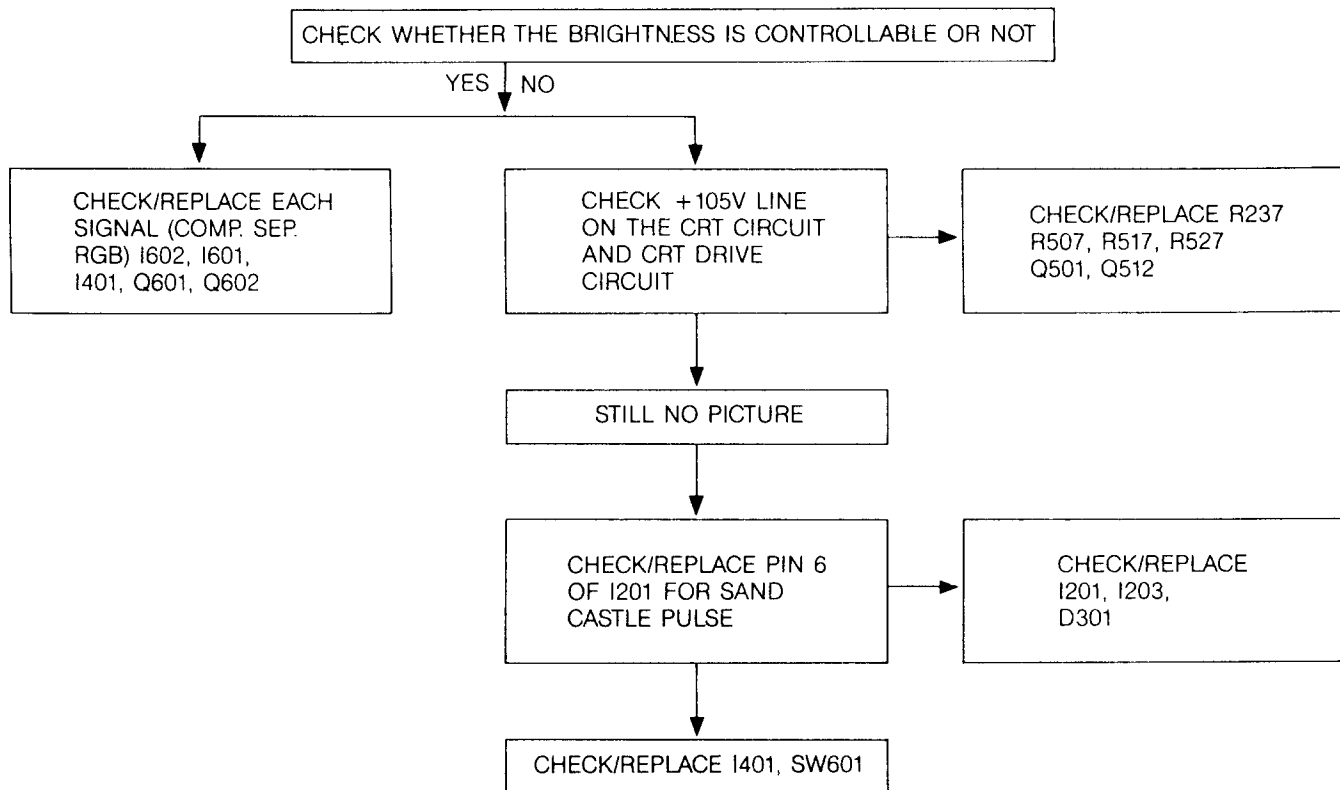

### 1. NO RASTER

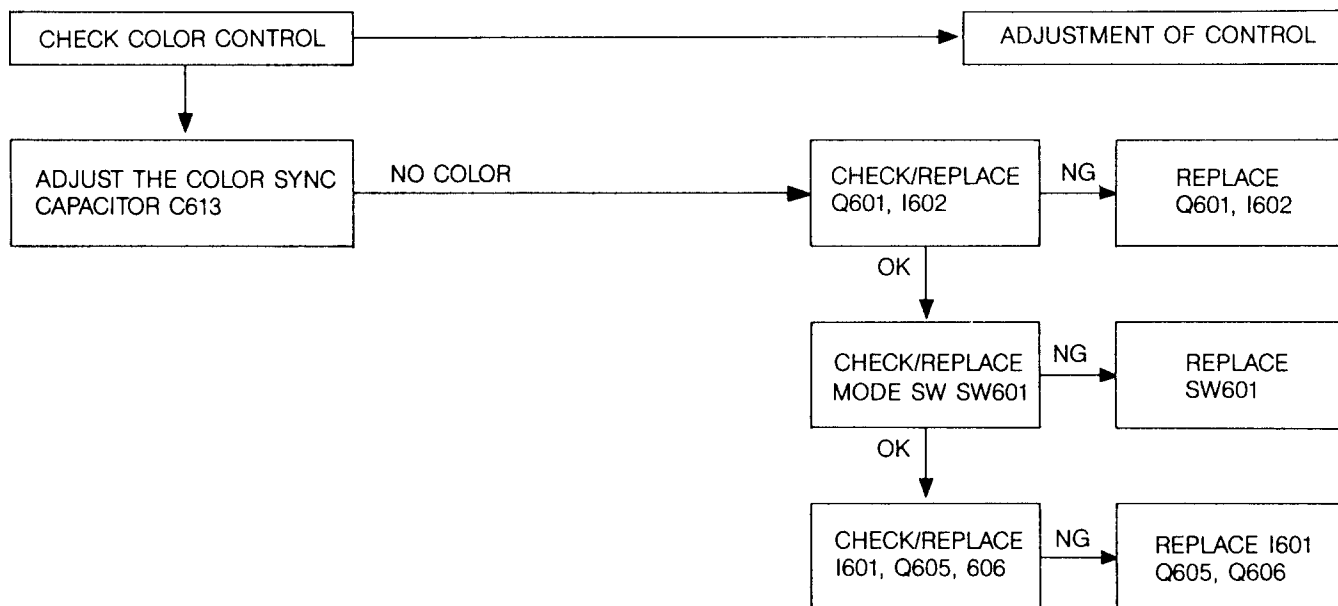

### 2. NO SOUND

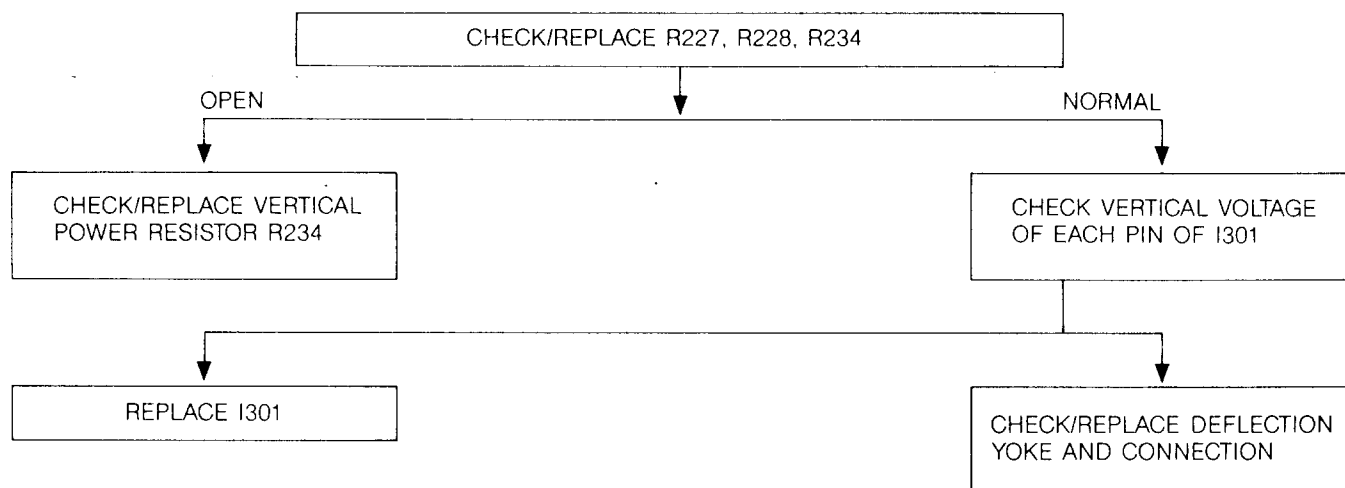

### 3. NO PICTURE

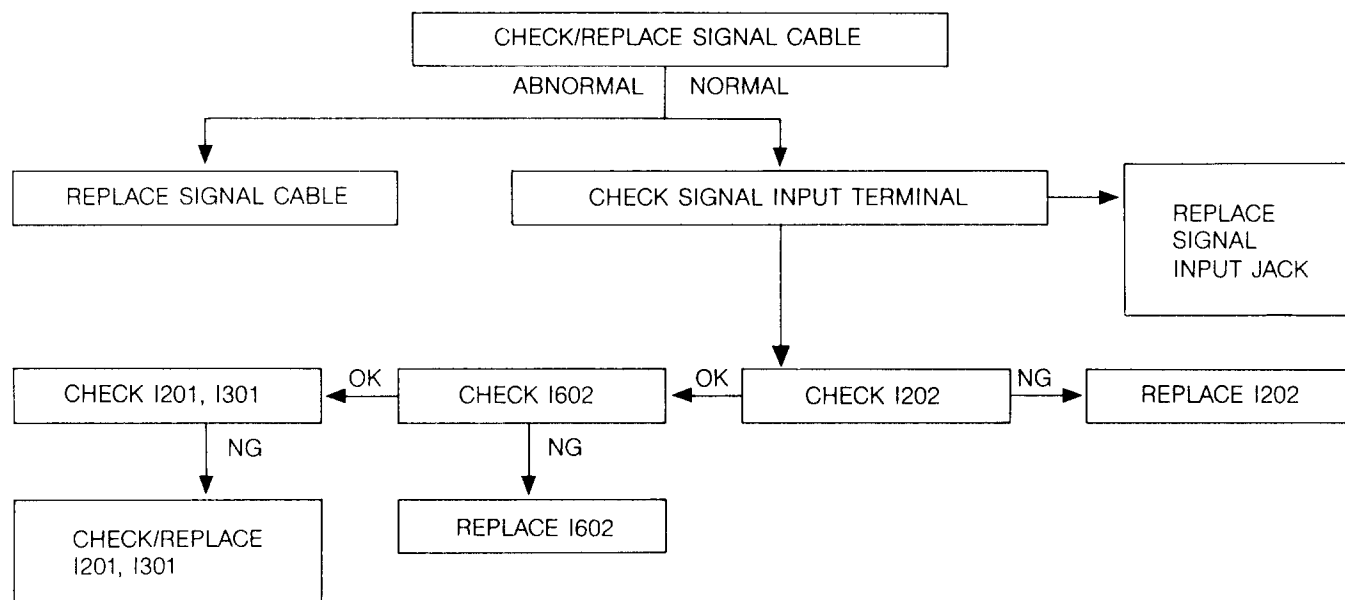

### 4. NO COLOR (FOR COMP & SET MODE)

## 5. NO VERTICAL SCAN (ONE HORIZ, ONE LINE RASTER)

## 6. OUT OF VERTICAL SYNC AND HORIZ. SYNC (COMPOSIT SYNC)

## DESOLDERING OF ICs AND TR

The following tools are suggested for desoldering semiconductors:

### 1. Desoldering tools

- Hand suction type-Solda-Pull® (model SS011, Edsyn Inc. Van Nuys, CA) or equivalent.
- Wire-Wick type-Solder-Wick® (size = 4, Solder Removal Co., Covina, CA) or equivalent.

**2. Soldering Iron**—Maximum wattage recommended is 40W. Higher power soldering irons may damage the copper foil of board.

### Note:

When desoldering parts, heat the joint and remove the solder quickly. The PC foil may peel from the board if heat is applied for too long.

Fig. 9

## SERVICE ADJUSTMENT

### FOCUS ADJUSTMENT

Adjust the focus control, located on the H.V. unit (T202) for maximum overall definition and fine picture detail with brightness and contrast controls set at normal viewing levels.

### VERTICAL SIZE (R306) ADJUSTMENT

The vertical size (height) control is the screwdrive adjustment that is accessible through the front cover. Location of the control is shown in Figs. 1 and 10. These controls must be adjusted until the correct picture or test pattern is obtained.

### COLOR AMPLITUDE AND PHASE ADJUSTMENT

- Receive PAL/DEM-bar signal.
- Connect the probe of oscilloscope to B-Y output.
- Adjust L602 and R602 in order to make wave form flat on screen.
- Receiver color bar signal instead of DEM signal.
- Adjust L602 to make B-Y output stable.

### CIRCUIT PROTECTION

4.0A fuse, mounted on the main PC board, has been provided to protect the power out put circuit. See Figs. 2 and 10.

### HORIZONTAL HOLD (R225) ADJUSTMENT (SEE FIGS. 2 AND 10)

Receive the color signal.  
Set the brightness and contrast controls to a normal position. A warm-up period of at least five minutes should be allowed and alignment should be done.

- Connect a jumper wire between pin 12 of I201 and ground line.
- Adjust the horiz. hold control (R225) until the picture is stable. (Tune R225 to 15.734 KHz)

Fig. 10

## APC ADJUSTMENT (SEE FIG. 10)

This adjustment should be made only when the chroma/video (I601) or parts of the APC circuit have been replaced, or when the picture colors are unstable. For adjustment, use the APC, ADJ control (C613).

### Procedures

1. Apply a color bar signal to the video input terminal.
2. Turn the color control fully clockwise and position the tint control at the mechanical center.
3. Connect a jumper wire between pin 11 of I201 and ground line.
4. Turn the APC ADJ. control (C613) with an insulated screwdriver until the color bar on the screen is synchronized.
5. Removed the jumper wire and capacitor.

## HIGH VOLTAGE CHECK

High voltage is not adjustable but must be checked to verify that the monitor is operating within safe and efficient design limitations as specified:

1. Remove cabinet back.
2. Operate monitor for at least 15 minutes at 220V AC line with video signal or test signal properly tuned in.
3. Rotate the brightness and contrast controls to maximum clockwise position.
4. Connect an accurate high voltage meter to CRT anode.  
Reading should be between 22 KV and 24 KV.

## CONTROLE DE HAUTE TENSION

La haute tension n'est pas réglable mais doit être contrôlée afin de s'assurer que le moniteur fonctionne d'une mesure de sécurité et d'efficacité déterminée par le cahier des charges. Pour le faire:

1. Enlever le couvercle d'arrière du cabinet.
2. Faire fonctionner le moniteur pendant au moins 15 minutes à la ligne de 220V, C.A. en accordant correctement le signal de vidéo ou celui d'essai.
3. Tourner à fond les commandes de brillance et de contraste dans le sens de aiguilles d'une montre.
4. Brancher un voltmètre de haute précision sur l'anode de CRT. La valeur relevée doit être comprise entre 22 KV et 24 KV.

## VERTICAL POSITION CONTROL (R318) ADJUSTMENT (SEE FIG. 10)

The vertical position control (R318) is the VR which controls the vertical position of the picture. If the vertical position of the picture is not at the center of the picture tube, adjust the vertical position by turning this control.

## VERTICAL LINEARITY CONTROL (R308) ADJUSTING (SEE FIG. 10)

The vertical linearity control (R308) is the VR which controls the vertical linearity of the picture. After received cross hatch pattern, adjust the vertical linearity by turning this control.

## SCREEN ADJUSTMENT

It is important to adjust the screen volume in Auto white Balance system. Receive cross hatch signal. Set the contrast and bright volume to a maximum position. Turn the screen volume (see. fig. 10) to the clockwise until find out retrace line. After that, Turn the screen volume to the unclockwise until just disappear joint. Confirm the state of video cut off with contrast and bright control. If unstable cutoff screen, readjust with above action.

## COLOR PURITY ADJUSTMENT

For best results, it is recommended that the purity adjustment be made in the final location. If the monitor will be moved, perform this adjustment with it facing east or west. The monitor must have been operating 15 minutes prior to this procedure and the faceplate of the CRT must be at room temperature. The monitor is equipped with an automatic degaussing circuit. However, if the CRT shadow mask has become excessively magnetized, it may be necessary to degauss it with a manual coil. Do not switch the coil OFF while the raster shows any effect from the coil. Purity magnets are used for color purity and vert, centering adjustment. Purity adjustment procedure is as follows.

### NOTE:

Before attempting any purity adjustments, the receiver should be operated for at least 15 minutes.

1. Demagnetize the picture tube and cabinet using a degaussing coil.
2. Turn the CONTRAST and BRIGHTNESS controls to maximum.
3. Open the R509 and R529 to provide only a green raster.
4. Loosen the clamp screw holding the yoke, and slide the yoke backward to provide vertical green belt (zone) in the picture screen.
5. Remove the Rubber Wedges.
6. Rotate and spread the tabs of the purity magnet (See Fig. 7) around the neck of the picture tube until the green belt is in the center of the screen. At the same time, center the raster vertically.
7. Move the yoke slowly forward until a uniform green screen is obtained. Tighten the clamp screw of the yoke temporarily.
8. Check the purity of the red and blue raster by opening the cathode resistor.
9. Obtain a white raster, referring to "Black and white tracking". (Sold the opened resistor)
10. Proceed with convergence adjustment.

## STATIC CONVERGENCE ADJUSTMENT

A recently developed deflection yoke and electron guns construction has been used on this equipment in combination with in-line guns and black stripe screen to make a barrel-type magnetic-field distribution for vertical deflection and pin-cushion-type magnetic field for horizontal deflection with which a self-converging system can be obtained, this type is different from conventional unity magnetic field distribution type deflection yoke, 4-pole magnets and 6-pole magnets are employed for static convergence instead of a convergence yoke.

1. A crosshatch signal should be connected to the video input terminal of the monitor.
2. Adjust the BRIGHTNESS and CONTRAST Controls for well defined pattern.
3. Adjust two tabs of the 4-pole Magnets to change the angle between them (See Fig. 11) and superimpose red and blue vertical vertical lines in the center area of the picture screen. (See Fig. 12)
4. Turn both tabs at the same time keeping their angles constant to superimpose red and blue horizontal lines at the center of the screen. (See Fig. 12)
5. Adjust two tabs of 6-pole Magnets to superimpose red/blue line with green one. Adjust the angle affects the vertical lines and rotating both magnets affects the horizontal lines.
6. Repeat adjustments 3, 4, 5 keeping in mind red, green and blue movement, because 4-pole Magnets and 6-pole Magnets interact and make dot movement complex.

CONVERGENCE MAGNETS

Fig. 14 CIRCUMFERENCE CONVERGENCE  
BY DEF. YOKE

## PRECISE ADJUSTMENT OF DYNAMIC CONVERGENCE (SEE FIG. 11-16)

### NOTE:

This adjustment requires trubber Wedge Kit.

1. Loosen the clamping screw of deflection yoke to allow the yoke to tilt.
2. Place a wedge as shown in Fig. 15 temporarily. (Do not remove cover paper on adhesive part of the wedge.)
3. Tilt front of the deflection yoke up or down to obtain better convergence in circumference. (See Fig. 14) Push the mounted wedge into the space between picture tube and the yoke to hold the yoke temporarily.
4. Place other wedge into bottom space and remove the cover paper to stick.
5. Tilt front of the yoke right or left to obtain better convergence in circumference. (See Fig. 14)
6. Hold the yoke position and put another wedge in either upper space.  
Remove cover paper and stick the wedge on picture tube to hold the yoke.
7. Detach the temporarily mounted wedge and put it in another upper space.  
Stick it on picture tube to fix the yoke.
8. After placing three wedges, recheck overall convergence.  
Tighten the screw firmly to hold the yoke tightly in place.
9. Stick 3 adhesive tapes on wedges as shown in Fig. 15.

## BLACK AND WHITE TRACKING

The purpose of this procedure is to optimize the picture tube to obtain a good black and white picture at all brightness levels, while at the same time, achieving maximum usable brightness. Normal purity adjustment must precede this procedure.

1. Set the Video mode switch to SEP Mode position.
2. Connect the black signal to SEP input terminal.
3. Set the brightness and contrast control at the mechanical Max position.
4. Rotate screen VR fully counter clockwise until retrace lines appear on the screen.
5. Rotate screen VR fully counter clockwise until retrace lines appear on the screen.
6. Slowly turn the screen control on FBT anticlockwise until retrace lines just disappear on the screen for Auto Cut off control.
7. Receiver the white signal.
8. Adjust R.G.B. drive controls (R412, R413, R414) to produce a hi-lite white screen.
9. Set the brightness and picture controls to minimum.  
Then, the raster should appear dark.
10. Move the brightness control until a dim raster is obtained.
11. If necessary, touch-up adjustment of the screen controls to obtain best white uniformity on the CRT screen.
12. Set the brightness and picture controls at the mechanical center position.  
If necessary adjust the R.G.B. drive controls to produce a uniform black and white picture.

# SCHEMATIC DIAGRAM (MODEL CMC-1)

## NOTE

1. RESISTANCE IS SHOWN IN OHM, K=1,000, M=1,000,000.
2. UNLESS OTHERWISE NOTED IN SCHEMATIC ALL CAPACITOR VALUES LESS THAN 1 ARE EXPRESSED IN mfd AND THE VALUES MORE THAN 1 IN pF.
3. UNLESS OTHERWISE NOTED IN SCHEMATIC ALL INDUCTOR VALUES MORE THAN 1 ARE EXPRESSED IN uH AND THE VALUES LESS THAN 1 IN H.
4. VOLTAGES READ WITH "VTVM" FROM POINT INDICATED TO CHASSIS GROUND USING A COLOR BAR SIGNAL WITH ALL CONTROLS AT NORMAL • LINE VOLTAGE 120 VOLTS AC.
5. VOLTAGE READINGS SHOWN ARE NOMINAL VALUES AND MAY VARY  $\pm 20\%$  EXCEPT H.V.
6. THIS CIRCUIT DIAGRAM IS A STANDARD ONE. CIRCUITS PRINTED MAY BE SUBJECT TO CHANGE FOR PRODUCT IMPROVEMENT WITHOUT PRIOR NOTICE.

## "WARNING"

BEFORE SERVICING THIS CHASSIS, READ THE "X-RAY RADIATION PRECAUTION", "SAFETY PRECAUTION" AND "PRODUCT SAFETY NOTICE" IN THE SERVICE MANUAL.

CAUTION TO THE SERVICE TECHNICIANS;  
BEFORE RETURNING THE RECEIVER TO THE CUSTOMER, TO MAKE APPROPRIATE LEAKAGE CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE PROPERLY INSULATED FROM THE SUPPLY CIRCUIT.

CAUTION; THE SHAD DIRGRAM DESIGNATE C SPECIAL CHARACTERIS AND SHOULD BE REPL IDENTICAL TO THOSE IN OR SPECIFIED IN THE F DO NOT DEGRADE THE THROUGH IMPROPER S

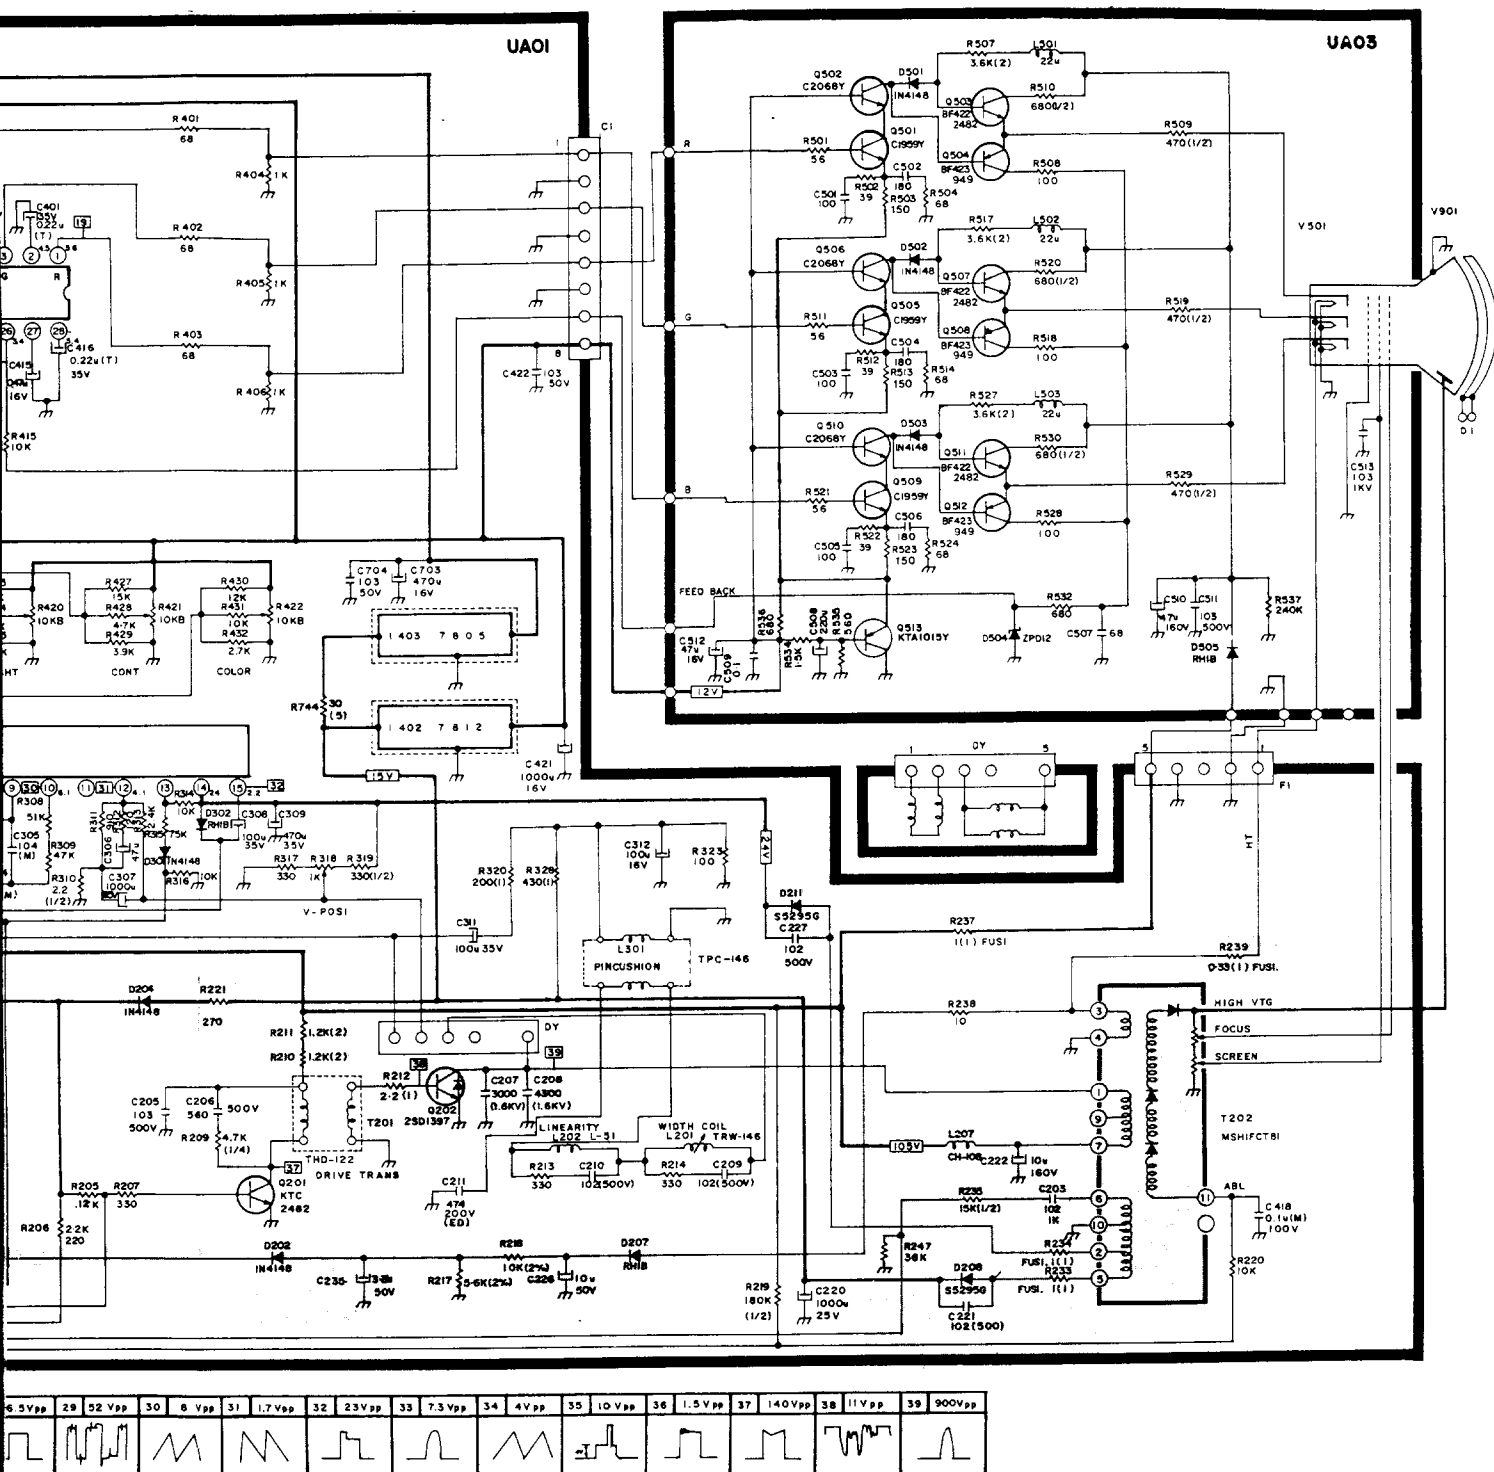

# CHASSIS: A-16-2

"WARNING"  
 SERVICING THIS CHASSIS, READ THE  
 "RADIATION PRECAUTION", "SAFETY PRECAUTION"  
 "PRODUCT SAFETY NOTICE" IN THE SERVICE MANUAL.

ON TO THE SERVICE TECHNICIANS;  
 RETURNING THE RECEIVER TO THE CUSTOMER,  
 APPROPRIATE LEAKAGE CURRENT OR RESISTANCE  
 ELEMENTS TO DETERMINE THAT EXPOSED PARTS  
 PROPERLY INSULATED FROM THE SUPPLY CIRCUIT.

CAUTION; THE SHADED ARE AS IN THE SCHEMATIC  
 CIRCUIT DESIGNATE COMPONENTS WHICH HAVE  
 SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY  
 AND SHOULD BE REPLACED ONLY WITH TYPES  
 IDENTICAL TO THOSE IN THE ORIGINAL CIRCUIT  
 OR SPECIFIED IN THE PARTS LIST.  
 DO NOT DEGRADE THE SAFETY OF THE RECEIVER  
 THROUGH IMPROPER SERVICING.
